

PD TIS Fielding Update: FOC and Beyond

In September 2011, the Transportation Coordinators' Automated Information for Movement System II (TC-AIMS II) reached Full Operational Capability (FOC). However, the PD TIS mission does not stop with FOC. TIS customer support in the coming year includes:

- Pre-Planned Product Improvements (P3I) for TC-AIMS II Version 6.2.1 include compatibility with Microsoft Windows Vista and Windows 7, a data previewer for improved accuracy of information sent to the Computerized Movement Planning and Status System (COMPASS), and the introduction of Turbo-Trans to simplify Unit Movement Officer (UMO) tasks.
- High-priority requirements identified in two approved Joint Urgent Operational Needs Statements include improved in-transit visibility of supplies and equipment, an automated Aviation Movement Request (AMR) management system, and web services for enhanced information sharing with other systems.
- TC-AIMS II version 7 (Wilton) design and development will include a web-based interface and infrastructure, edit checks and validations of user entered data, and over 40 fixes.

TIS Subject Matter Experts (SMEs), functional analysts, and other program staff will continue to provide 24/7 world-class customer support. The entire PD TIS staff looks forward to another year of great support to our customers as they deploy in support of overseas contingency operations.
